(54) SUN ROOF

(57)Abstract:

PURPOSE: To enable a weather strip to separate by charging from a point end part of a stop lip over to a flange in the peripheral edge of a window frame panel with no binding material layer, in the binding material layer provided in a seal part into press contact with an upper surface of a window glass and between the window glass of a weather strip brought into contact with a lower surface to interpose an end part and the window frame panel.

CONSTITUTION: In a bonding agent layer 4 between a window glass 1 and a window frame panel 2, a range between a dam member 5 and a point end of a stop lip 37 is charged with the layer 4, and a range from a point end part of this stop lip 37 over to a flange 21 of the window frame panel 2 is not charged. Accordingly, since the bonding agent layer 4 is not placed around the window frame panel 2 and lower surfaces of the stop lip 37 and a mounting base part 31, the stop lip 37 and the mounting base part 31 are not substantially bonded relating to the window frame panel 2 and the window glass 1. Since the bonding agent layer 4 serving also as a sealer is not completely hardened, in connection of this stop lip 37 to the bonding agent layer 4, the stop lip can be separated to be easily torn off.
